Experienced SRE & DevOps Engineer | Cloud Native Applications | Reliability & Automation

PROFILE SUMMARY

Site Reliability Engineer with 4 years of experience ensuring system reliability, scalability, and performance across cloud-native environments. Skilled in Kubernetes, CI/CD, IaC, and observability, with a strong focus on incident management, automation, and service availability. Passionate about improving SLIs/SLOs, optimizing infrastructure, and driving operational excellence through automation and continuous improvement.

SKILLS

CORE COMPETENCIES

- Site Reliability Engineering (SRE)
- Cloud Architecture and Optimization
- Kubernetes and Container Orchestration
- Infrastructure as Code (IaC)
- Resource Utilization and Performance Tuning
- High Availability and Zero-Downtime Engineering
- Incident Response and System Reliability
- Cloud Security and Compliance

TECHNICAL

- Cloud Platforms: AWS, Azure, GCP
- Orchestration: Kubernetes, Docker, Karpenter, Kubernetes Operators
- Infrastructure as Code (IaC): Terraform, Terragrunt
- CI/CD: GitLab, Argo CD, Jenkins, Helm
- Monitoring & Logging: ELK Stack, Prometheus, Grafana
- Operating Systems: Linux

EDUCATION

Bachelor's degree from GLBITM

Bachelor of Technology in Electronics and Communication Engineering | 2018–2022 | GPA: 8.4

RECOGNITIONS

Paytm Rockstar Award (May 2023)

Received the award for migrating a legacy application to EKS, implementing IaC to eliminate manual provisioning, and achieving 25–40% monthly cost savings (~\$2,200).

InnoAce Award (Innovaccer)

Received the award for upgrading 100+ Amazon EKS clusters (v1.29 → v1.31) with minimal downtime, enhancing stability and security

WORK EXPERIENCE

Site Reliability Engineer II at Innovaccer in Noida - Jul 2024 - Current

- Rolled out Karpenter for optimized Kubernetes node provisioning, reducing infra cost, and scaling time.
- Led multi-tenant migration of customers to shared Kubernetes clusters, with minimal downtime.
- Performed EKS cluster upgrades (100+), ensuring minimum downtime for production workloads.
- Migrated Bastion hosts from CentOS to Ubuntu to align with enterprise standards.
- Implemented Cilium (CNI) and API Six (API Gateway) to improve networking and traffic management.
- Developed one-click infrastructure automation for AWS and Azure using Terraform and CI/CD pipelines.
- Supported production incidents, providing RCA, on-call support (24/7), and customer communication.
- Maintained and deployed apps using ArgoCD, GitLab, and Helm Charts.
- Guaranteeing more than 99% SLA adherence in managing multi-account environments, ensuring seamless operations and deployments.
- Managing code deployments of 10+ microservices on a daily basis, fixes, updates, and related processes to ensure seamless software operations.
- Developing and maintaining more than 100 Helm Charts for efficient Kubernetes manifest templating, facilitating rapid deployment and configuration improvement of containerized applications.

DevOps Engineer at Paytm One97 Communications in Noida - Aug 2021 - 2024

- Managed and maintained production applications on AWS EC2 (Auto Scaling Groups + ALB), later migrated workloads to Amazon EKS for better scalability and maintainability.
- Designed and provisioned infrastructure from scratch using Terraform, ensuring consistency and automation across environments.
- Migrated monolithic applications running on VMs to microservice-based architecture on EKS, improving reliability and deployment speed.
- Saved over \$2,200/month (~25–40% reduction) by migrating workloads to AWS Graviton-based instances.
- Implemented centralized logging using the ELK Stack and monitoring with Prometheus and Grafana, improving visibility and issue detection.
- Established a company-wide centralized ELK Stack, standardizing log aggregation and search across all services.
- Set up CI/CD pipelines to automate deployments for VM-based applications, improving delivery speed and reliability.
- Collaborated with development teams to troubleshoot production incidents, perform root cause analysis, and improve MTTR.
- Provided 24/7 on-call support for critical systems, ensuring high availability and rapid issue resolution.
